Quick Tips:

- The radio should always be the first thing switched on, and the last thing off. Never switch the car on without the radio!
- Don't keep pulling the starter and flood the engine! Watch the above video and have trouble-free starting.
- Use only high quality synthetic 2-stroke oil at a 25:1 ratio; low quality or not enough oil mixed in the fuel can cause immediate damage to the engine.
- Check the air filter after every run! Your car needs this to breathe, and to protect the engine's internals. Clean the filter and re-oil whenever necessary.
- After every run: check your wheel nuts are still tight, and check that no bolts have loosened during the run – especially around the exhaust. If you do encounter any loose parts, add a small amount of blue medium-strength thread locker before reinstalling.
