

# ▶▶ Xinlehong Sprint #9125 quick start guide

Congratulations on your purchase of this awesome RC Car from Xinlehong, the Sprint 9125. All of us here at HD love this car and hope you will too! Here's the best way to get started and have a hassle-free first run.

## Steps

1. **Charge the battery.** Plug the included USB charger into any convenient USB port (a smartphone charger works excellent), then plug the battery in. When the LEDs are solid green, your battery is fully charged and ready to go.
2. Install three AA batteries in the hand controller/transmitter.
3. Lastly, make sure all the wheels are tightened with the included wrench.
4. With the battery fully charged and installed in the car, turn the radio on first, then the car, and you're ready to go racing.

## Most common mistakes

- The car has an on/off switch, if you're trying to use it for the first time, ensure the battery is plugged in and the switch is set to on.
- Leaving the battery plugged in. Always unplug the battery after use

## Recap

Besides keeping the car relatively clean and checking the wheel nuts for proper tightness, that's all for maintenance. Remember it's best practice to unplug the battery from the vehicle when not in use and to store the battery fully charged rather than flat – lipo batteries don't like being low on charge, and can be damaged if run too flat or left discharged for too long.
